

Web Site Design and Development

Lecture 12

CS 0134
Fall 2018
Tues and Thurs
1:00 – 2:15PM

display

- **The display property allows you to change the display type of element you are working with.**
- **Display can accept the following values**
 - block: make the element display like a block element
 - inline: make the element display like an inline element
 - none: make the element not display on the screen at all
- **Example**
 - display: none;
 - display: block;

Menus

- **Menus are built using lists of links inside a nav element**
- **The type of list used is typically ul**
- **You make a submenu by nesting a ul element inside of one of the parent menu's li elements.**

Let's Make Menus
