RESEARCH INTERESTS My research interests lay in network science and computational urban, social and sports science. I am involved in developing analytical methods and metrics for heterogeneous, composite, networks utilizing advanced linear algebra and statistical techniques. I am interested in analyzing civic and social datasets for creating models that can facilitate policy making, local government decisions as well as local, small, businesses' operations. I am also working with sports data for facilitating team and player evaluation as well as in-game decision making.
