

COLLOQUIUM

On PDE aspects of incompressible fluid flows

Vladimir Sverak
University of Minnesota

March 27, 2015

We will discuss the incompressible Navier-Stokes and Euler equations from the PDE point of view. The discussion will include additional “toy model” equations. A brief exposition of classical difficulties will be included.

The lecture will take place in Thackeray 704 at 3:30pm.
Refreshments will start at 3:00pm.
