

CS 441: Discrete Structures for Computer Science

PhD. Nils Murrugarra-Llerena
nem177@pitt.edu

Who am I?

**B.S. Computer Science at
National University of
Trujillo**

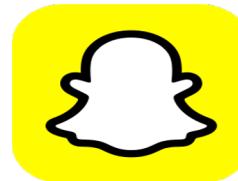

**M.S. in Computer Science at
University of São Paulo in
AI**

Who am I?

PhD in Computer Science at
University of Pittsburgh in
Computer Vision

Research scientist at
Snap Inc.

Who am I?

**Assistant professor at
Weber State University**

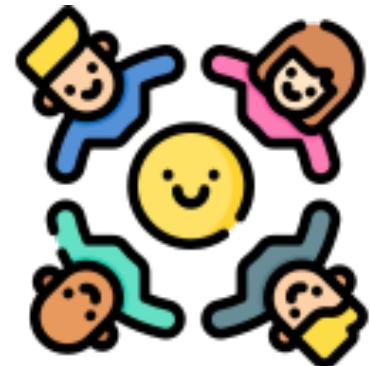

**Teaching Assistant
Professor at University
of Pittsburgh**

[Students' presentations]

Name, hobbies, and mention one thing that you expect to learn in
this course ☺

Let's know each other

- Hobbies
- Course Expectations
- Computer Accessibility

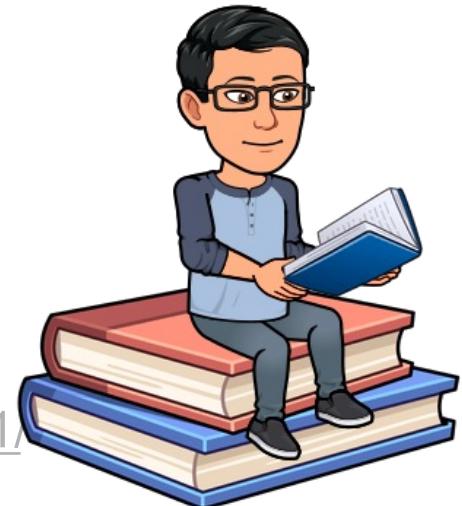

Syllabus

Syllabus

Course intro: Syllabus

- Contact Information
 - Prof. Nils Murrugarra
 - nem177@pitt.edu
 - Please, add prefix “[CS 441]” in all emails.
 - Website: https://nineil.github.io/courses/spring26_cs441/
- Lectures:
 - [Section A] Tue/Thu: 9:30am - 10:45am @ IS 403
 - [Section B] Tue/Thu: 4:00pm - 5:15pm @ SENSQ 5502
- Office hours:
 - TBD (Please, fill this [form](#)). Inputs will be considered with my other courses, and my own schedule

Course intro: Textbook

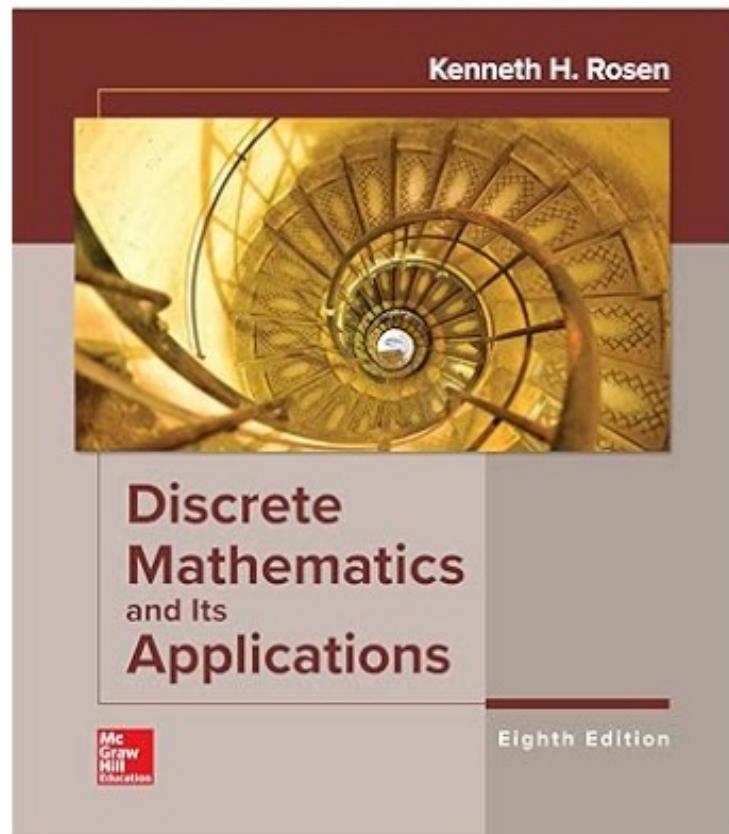

Discrete Mathematics and its
Applications

Edition: 8th

By Kenneth Rosen

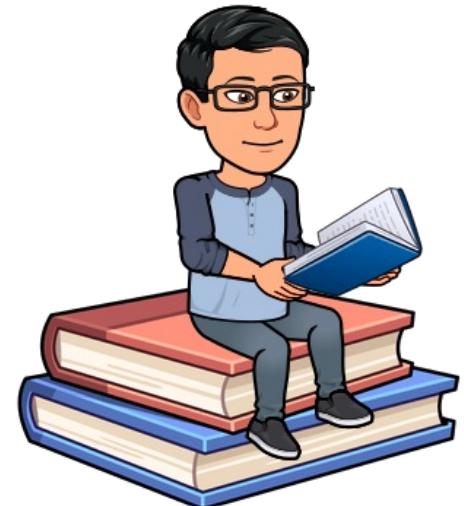

ISBN: 1260091996

Year: 2018

Course intro: What to expect?

- Material is based on previous iterations of *CS 441: Discrete Structures for Computer Science*.
- Exams mainly cover this material
- We will do around 11 to 13 assignments

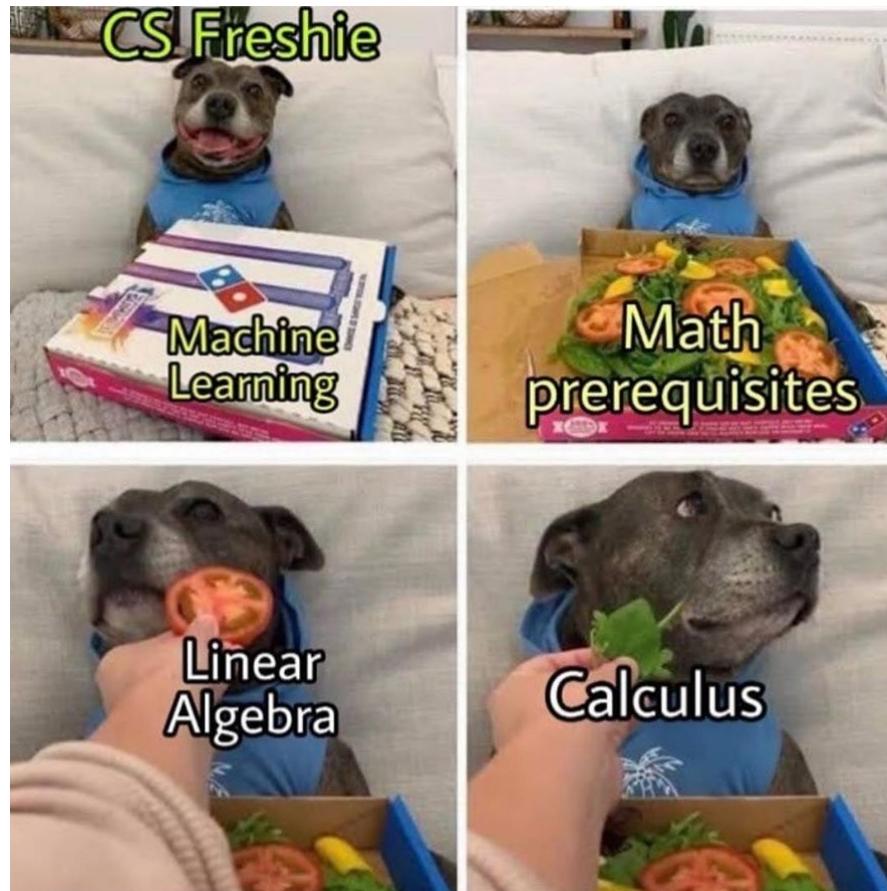

Course intro: What to expect?

- There will be a lot of work!
- However, you will learn a lot :). Please, ask questions in class and use office hours as needed.
- I would like to help you much as possible.

Course intro: What to expect?

H/T Kirk Pruhs

Questions?

Course overview

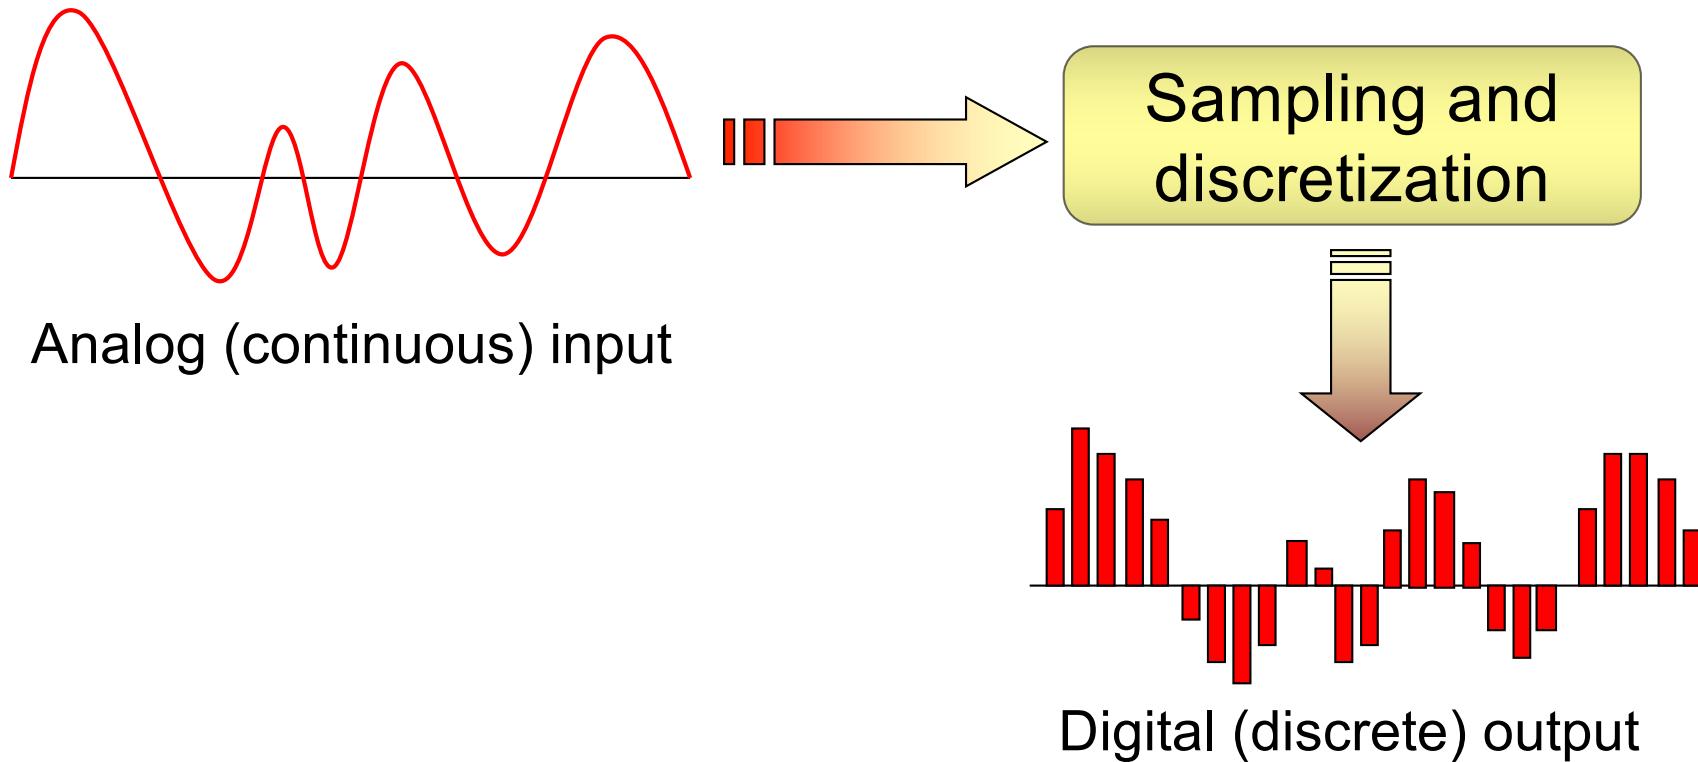

- What *is* discrete mathematics?
- Why is a math course part of the computer science curriculum?
- Will I really ever use this stuff again?
- How to succeed in this course?

What is discrete mathematics?

- Discrete mathematics is the study of *distinct* objects or structures and their relationships to one another
- For example:
 - How many ways can a valid password be chosen?
 - Can traffic flow between two computers in a network?
 - How can we transform messages to hide their contents?
 - How do we parse a given sequence of commands?
- By contrast, continuous mathematics (e.g., calculus) studies objects and relationships that vary continuously
 - e.g., position, velocity, and acceleration of a projectile

Why study discrete math?

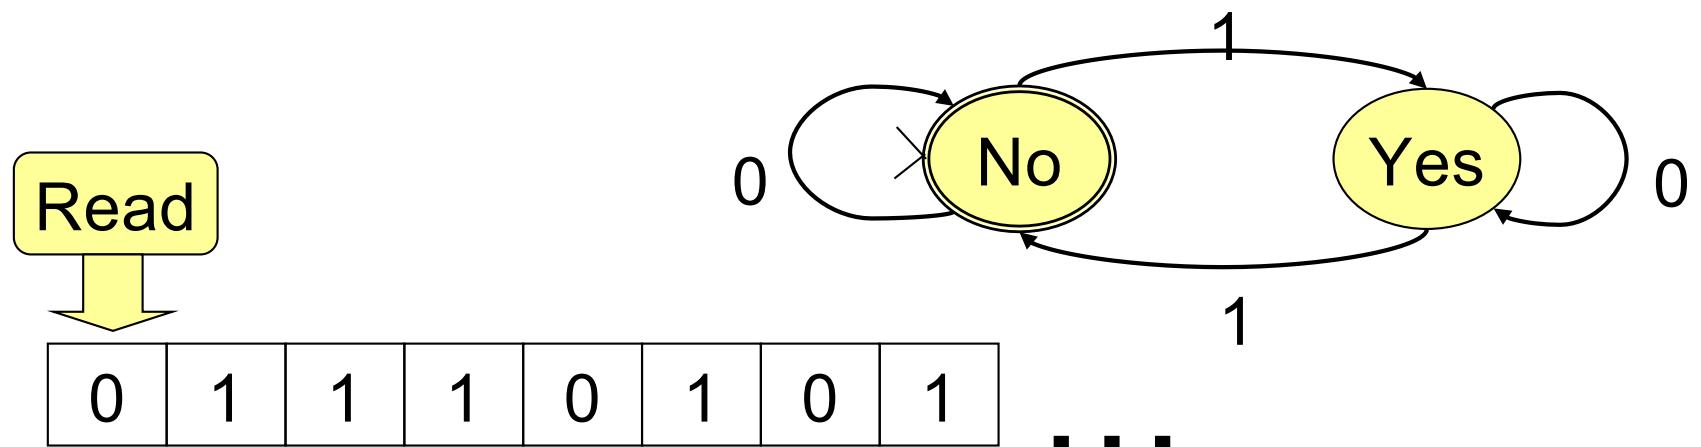

Reason 1: Computers **do not** process continuous data

Why study discrete math?

Reason 2: Computers aren't actually all that smart, they are just deterministic functions that map **discrete inputs** to **discrete outputs**

Example: Does a given bit string contain an odd number of 1s?

Why study discrete math?

In general: Discrete mathematics allows us to **better understand** computers and algorithms

```
function fib(int n)
  if(n == 0 || n == 1)
    return 1;
  else
    return fib(n-1) + fib(n-2);
```

```
function fib(int n)
  int first = 0;
  int second = 1;
  int tmp;
  for(i = 1 to n)
    tmp = first + second;
    first = second;
    second = tmp;
  end for
  return first;
```

Activity: Why study discrete math?

Start: 0:00

Floating Point Numbers: 2:33
<https://www.online-python.com/>

Set Theory: 4:14

Complexity Theory: 6:24

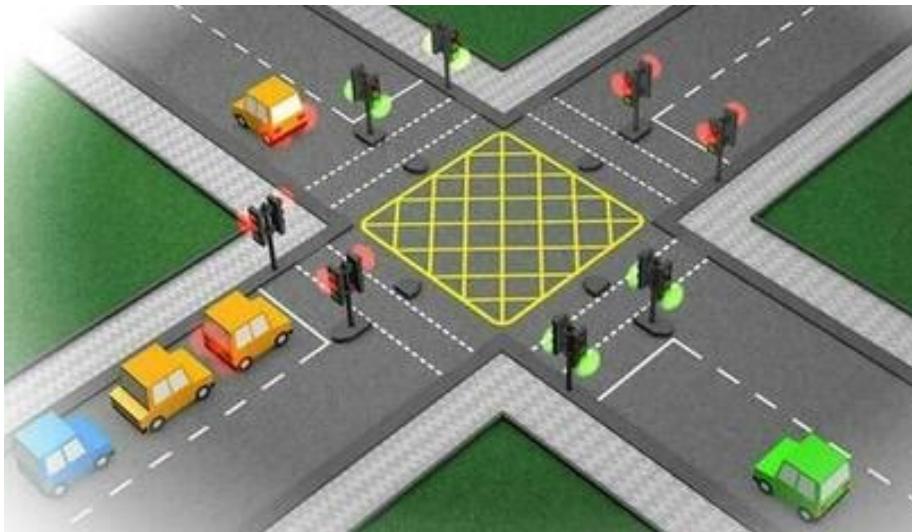

Statistics: 7:06

Tentative Syllabus

- Logic and proofs
- Sets
- Functions
- Algorithms and analysis
- Integers, modular arithmetic, cryptography
- Induction
- Relations

Are these topics really useful?

Logic and proofs

Logic and proofs

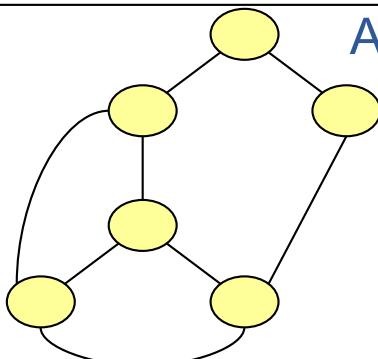

```
grant(X, projector) :- role(X, presenter), located(X, 104)
```

```
located(adam, 104)
```

```
role(adam, presenter)
```

=> ?grant(adam, projector)

=> *true*

Verifying data structures
and hardware

Automated reasoning, AI, security

exp()

+

3.1415

*

4

3 2

Parsing
expressions

function fib(int n)

int first = 0;

int second = 1;

int tmp;

for(i = 1 to n)

 tmp = first + second;

 first = second;

 second = tmp;

end for

return first;

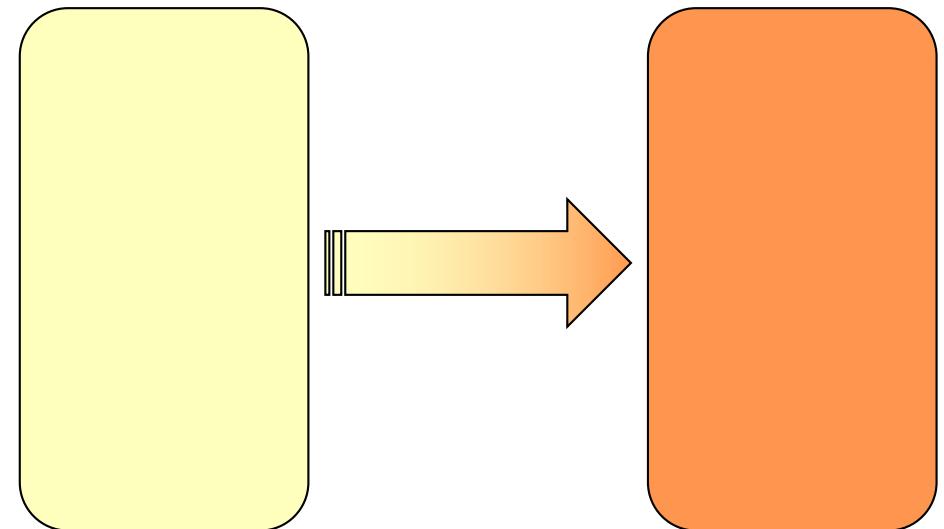

Algorithm and
protocol analysis

Sets

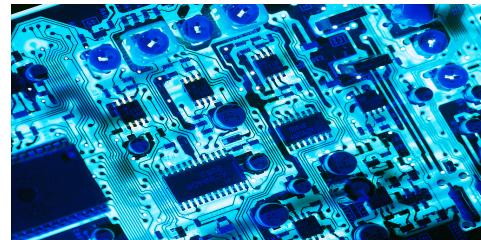

Sets define collections of objects...

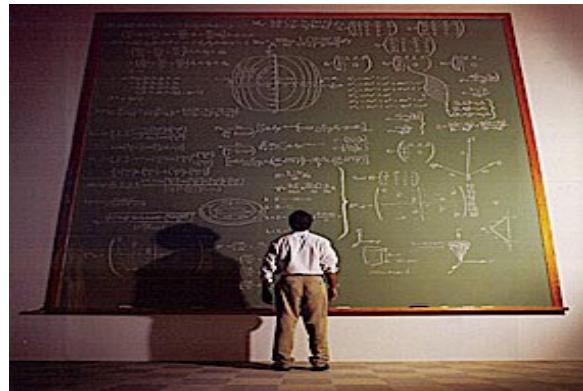

... and give us a means of reasoning about the relationships between objects → **Database Operations**

Functions

Hardware design

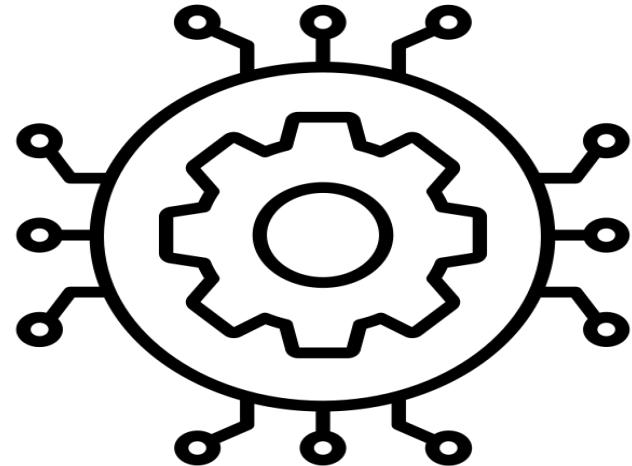

Theory of computation

Computer graphics

Algorithms and analysis

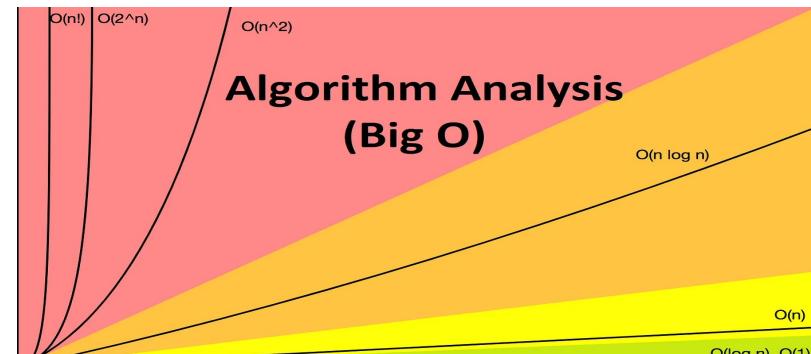

Studying algorithms helps us write better code...

LeetCode

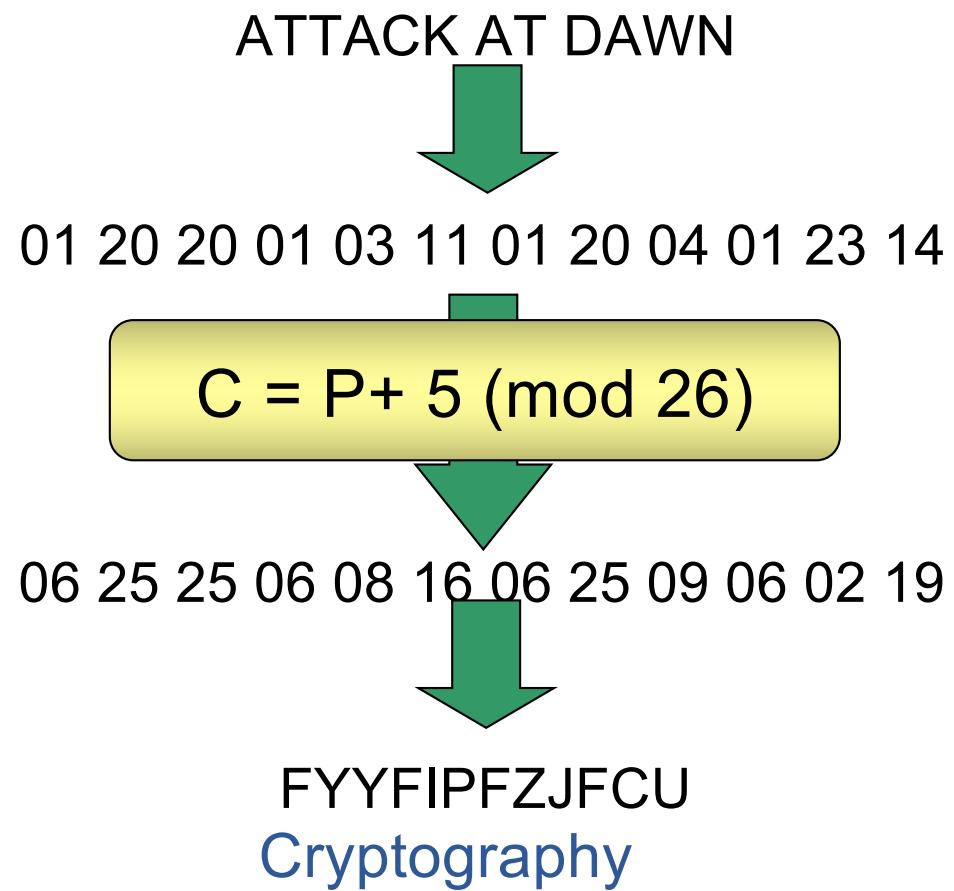

... and algorithm analysis helps us determine which approaches scale best

Integers and Modular Arithmetic

$$\begin{array}{r} 0111 \ 0101 \ 0110 \ 1011 \\ + \ 0101 \ 1001 \ 1110 \ 0001 \\ \hline 1100 \ 1111 \ 0100 \ 1100 \end{array}$$

Binary arithmetic and
bitwise operations

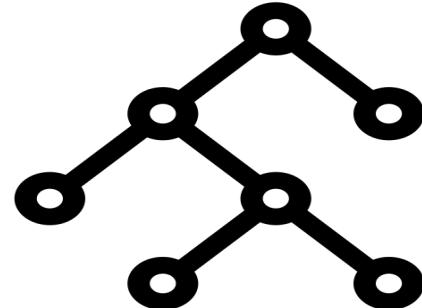

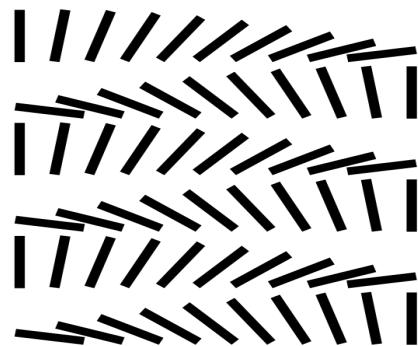

Induction

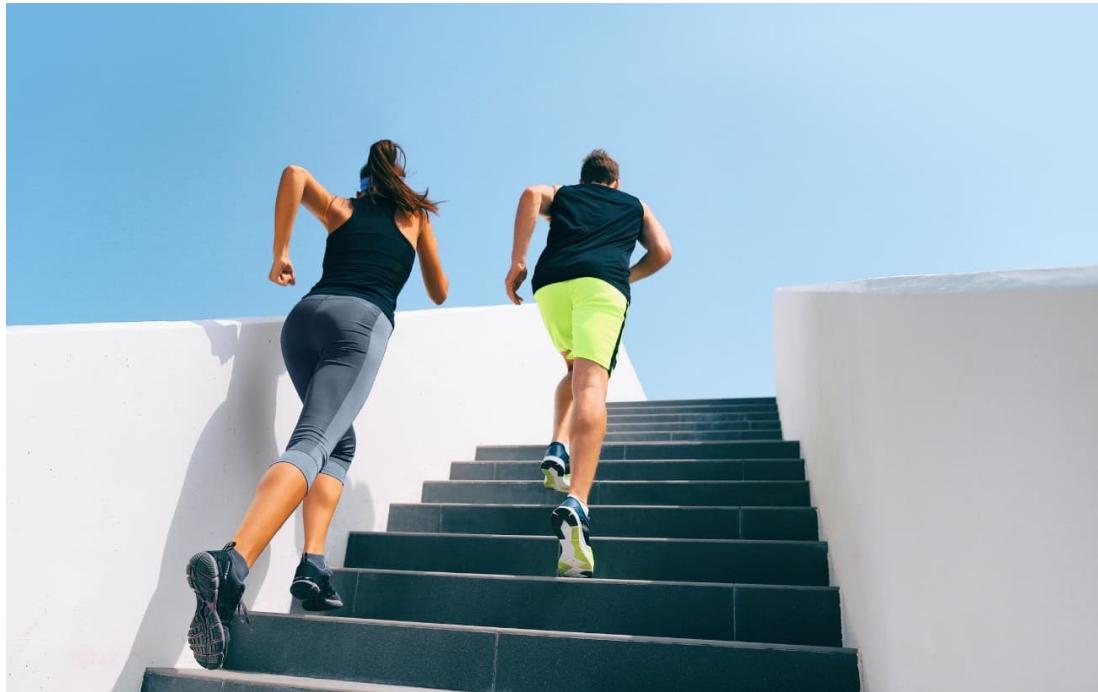

Induction is a proof technique that helps us reason about infinite objects (e.g. recursion)...

... and processes...

... and data structures!

Relations

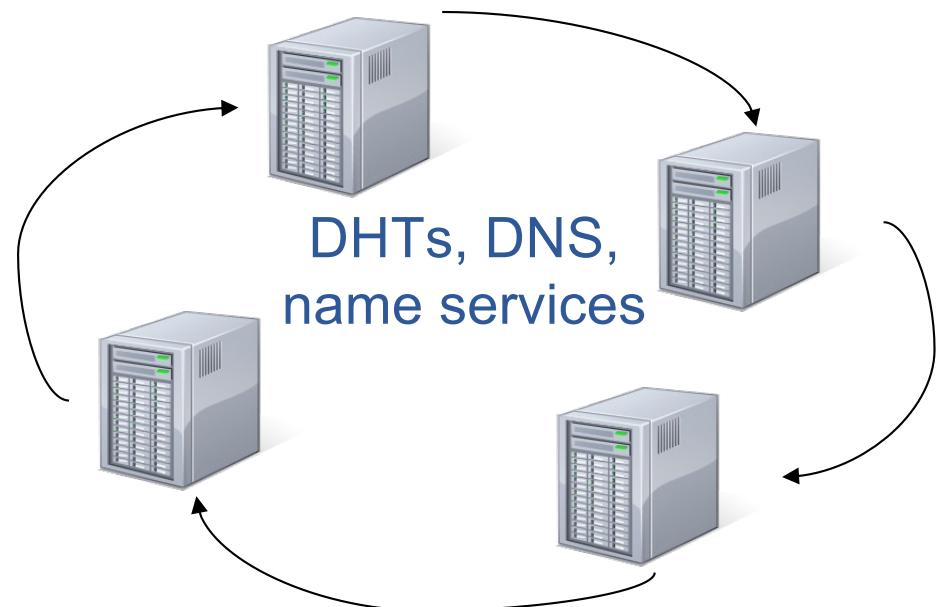

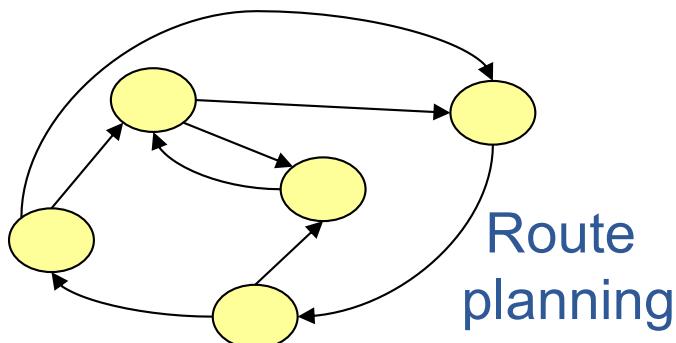

How to climb a stair?

Relations

Relational databases

Syllabus, redux

- Logic and proofs
- Sets
- Functions
- Algorithms and analysis
- Integers, modular arithmetic, cryptography
- Induction
- Relations

Are these topics really useful?

Yes

Mastering discrete mathematics requires practice!

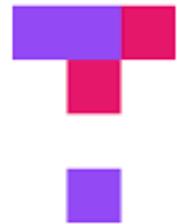

- Succeeding in this class requires practicing the skills that we will acquire, thinking critically, and asking questions
 - We are practicing clear and precise communication in the language of mathematics and logic—be specific!
- Keys to success:
 - Attend class and take notes
 - Do your homework
 - Work extra problems when you're unsure
 - Solutions to odd-numbered exercises are provided in textbook
 - Go to your recitation **every** week
 - Take advantage of office hours

What should I do now?

1. Check your Canvas notification settings
2. Read the chapter for next lecture
3. Decide if you need Inclusive Access, and opt out if not
4. Install Top Hat if you plan to use the mobile app
 - Then, wait to be added to the course on TH
5. Watch for a Miro invitation, where you'll submit in-class activities
6. Watch for a Gradescope invitation, where you'll submit recitation and homework assignments
7. Email me if you have any special circumstances that you may need accommodated

How will you be accessing the textbook (Rosen 8e)
this semester?

Submit on

TOP HAT

Final thoughts

- Our goal is to prepare you to be stronger computer scientists by:
 - Exploring the formal foundations of computer science
 - Developing critical thinking skills
 - Articulating ties between theory and practice
- Next: Propositional logic (Sec 1.1)
